
a
same, with the modelled 1-in-100-yr surge reach in place of the flood zone
Flood map: anchored to coastal geography (FEMA effective SFHA)
Extreme-rain flooded area
93% 65 km²
Rain-exposed basement lots
97% 21,728 / 22,443
Rain-exposed underground stations
96% 44 / 46
Drainage standard: anchored to 1.75 in h⁻¹
Flood days below the standard, hourly rain
93% 290 / 311
Same, 30-min peak (estimated)
61% 15-min peak: 42%
Public insurance: follows the flood zone
Rain-side building loss (expected)
99% USD 2.5 bn
Basement apartments (policy terms)
100% ≥50,000 informal units
Reference: coastal sources, inside the flood zone
Tidal flood days (flood zone)
1% 56 of 67 tidal sensors inside
Surge-side 1-in-100-yr loss (insurance, expected)
81% USD 8.2 bn
